

Test Scores

I want to create one single variable to store every test score from every student I've ever had.

Use the following maximums:

Years teaching	30
Semesters per year	3
Courses per semester	4
Students per course	100
Tests per student	4

1. Declare the variable
2. Write the expression to access this specific test score:

The fourth test
Taken by the tenth student
In the second course
Of the third semester
Of the first year
